ORE

Tenshoh seki

This ore, classified as a conglomerate, is well known for emitting terahertz waves. This ore has gained an excellent reputation of dedicated salons since being used in the first hot stone spa in Japan.

Black silica

The black Silica mined in Hokkaido has been proven in water clarification and public projects. It has also been proven in many GANBAN-YOKU installations, mainly in Northern Japan. Crushed stone and Cement resin are mixed to produce the bedrock for ganbanyoku.

Magma Otohime ishi

According to folklore, heating a woman's body with this stone will improve her health, and ensure healthy babies and a safe childbirth. This beautiful lava stone, classified as a pyroxene amphibole, features hardness and a worm mat texture with a blue-gray color tone.

Magma Black

The unique structure in which lenticular black silica intrudes into the lava (pyroxene rhyolite) means that the far-infrared effect is enhanced. This is a special ore with excellent efficacy, durability, and texture. The high-level ore of mat finish for an excellent, nice and soft texture.
